

Premier Of Saskatchewan Speaks To Overseas League On Subject Of Immigration

Hon. Charles A. Dunning, Premier of Saskatchewan, has written addresses in the Old Country, and at a distinguished gathering at a luncheon of the Overseas League said that the "romance" first appears into of been shed on his career makes him a "more or less romantic figure" which his wife does not recognize.

Mr. Dunning was introduced by Lord Dunsany, by whom he was described as "the youngest premier in the British Empire having attained that position at the age of 37."

Mr. Dunning drew contrasts between life in the old country and life in the Old Country. "While," he said, "we cannot offer all the conveniences of a civilization such as that of London, we can offer you at least a better telephone service than London has. We cannot offer you the same trees, for 72 per cent of the people are on the land in Saskatchewan, a feature which I regard as a healthy condition in the present state of democracy; and because of that fact we are inviting only those who are prepared to work at agriculture as a livelihood in life."

Mr. Dunning said that naturally those who were of British origin in Canada desired to see a substantial influx of British emigration into the land to the end that the British institutions which had been maintained for the benefit of future generations, but civil revelation, a calm study of the history, taught them that when mankind was on the move in one of those great migratory movements it was possible for any one people or any one race to preserve the favorite vacant spot of their for their own use when it was convenient for them to accept it. "That was the lesson of history. They might endeavor during this period to preserve the milk work, the gate against all who were not of our blood. He was not an advocate of such a course, because realized the futility, its impossibility, in a period such as this and in relation to a country such as this."

"I can," said Mr. Dunning, understand the indignation of a British industrial worker to go to Canada where farming represents the milk work to be done. But it is hard to understand the attitude of mind which is thus evoked by the question, "What will the Government do for us if we go there?" I am convinced of this, that while the Government may do much in the way of advice and help to those who are willing to help themselves, no Government can confer on a man or a woman the virtues of self-reliance and initiative, which are the elements to a new land quest—those who are in England contemplating going to Western Canada to learn upon the state or province. I am very pleased to invite him or her to go home. We want people in Western Canada not to learn upon the state but to support the state and make it what it should be."

Empire industrial development was described by the Premier in his hands," he said, "I find here that the old conception of the Empire still prevails—that old conception, regard is the great in relation to some parts of the Empire today—the conception that these islands are the workshop of the Empire—that the function of the dominions and the colonies is to grow or raise raw materials, to be shipped here, to the workshop, and then manufactured into finished products here, and then sent back again for use in the dominions. That conception fails to take into account the changes that have come about from the population of these young dominions. The dominions are no longer British raw material, commercial and financial. How can we expect that members of the new world overseas should have behind them the industrial genius so characteristic of these at home? And consequently in these great dominions, such as Canada, with a wealth of natural resources of all kinds, the greatest of which is the human element, truly British in its character, is to develop these resources and manufacture them in little own country?"

"There is a necessity for a new orientation of British industry. It is the industry not of these islands, but of the Empire, wherever located. Isn't it strange that British industry has not followed that example to any thing like the same extent?"

Again alluding to immigration, Mr. Dunning stated, concluding what Sir James O'Sullivan, chairman of the "Immigration League" has said, as a "remarkable speech from a remarkable man," that "we cannot offer a man who comes to Saskatchewan outside cash, easily paid for in a salary. We have no rich people, judged by the standard of the Old Land; but then we have no poor people either."

judged by the standard of the Old Land. Any man who wants to work and isn't too particular what he works at, can get along all right in Saskatchewan—I know, because I have done it. There is lots of that sort here. I am convinced that the old pioneer of the race has not departed. It may be devoid of the poverty by a kind of wonder—as with the man who wants to know what the Government will do with him—but Nature soon rubs that off. There is nothing like getting out on a little homestead 20 miles from nowhere; you have to make for yourself, and it is a mighty good thing for any man with red blood in his veins to be placed upon his own responsibility in this way. There is no pot of gold at the foot of the rainbow out west; but it is a land of milk and honey—for the man who will keep cows and bees and do the work connected with them—and it is a land of milk and honey for the man and woman who are ready to stand on their own feet and face the future in the spirit of the pioneers of the past. To those who have the power to possess that spirit and feel it stirring within them, we offer a cordial invitation to come."

Production Of Shingles

Sixty Per Cent. of World's Supply of Red Cedar is in British Columbia. The manufacture of red cedar shingles is a branch of the forest industry which will keep thousands of men and women employed in the future. The annual output of shingles in British Columbia would also provide for the needs of the world. Red cedar grows to the best advantage in British Columbia, which produces 60 per cent. of the world's supply of this wonderful timber. In 1923 the red cedar cut was 572,000,000 feet. Considerably more than 2,000 men were employed in the manufacture of shingles. The shingle industry in the province has an annual output of 2,000 men, irrespective of those engaged in logging the red cedar for shingle manufacture. The red cedar cut last year would yield with proper line-cut or pure from mills will produce a fine quality of shingles.

Seeks Better Settlement

Methods of Emigration Officers in England Criticized by Britisher. "No Canadian emigration officers in England appear to know that the Department of Emigration is looking after settlers in Alberta in the way they are doing—taking the immigrants and placing them in the hands of the people who are interested in colonization matters there. It is all aware of what is being accomplished."

It is said Mr. Park, shipping agent of Exeter, Devon, who is on a tour of the west to discover possibilities for himself, and who is acquainted with what has been done for the newcomers who have been sent to Alberta to find work. Mr. Park is closely connected with the immigration of Devon men of the agricultural type. "With the Canadian emigration officers in England located at the ports and large cities, and not in the farming areas, it is impossible for the Canadian emigration officers to find out what Canada has to offer to prospective settlers," he said.

A servant girl was brought to a hospital suffering from the effects of a cold. The doctor questioned her as to her motive for taking it. "Well," she replied, "I wasn't feeling well, and I went to the nearest medical cupboard, and there was a bottle labeled, 'Three drops for an infant, six for an adult, a teaspoonful for a woman.' I knew I wasn't an infant, I wasn't sure about an adult, so I thought I must be the adult; and took a spoonful."

Eyes Open

Mr. (reading) the paper tells of a woman who married a man under the impression that he was somebody else. How strange.

Mrs.—Not at all. I did the same thing myself.

The only woman in the world who makes a business of breeding lions is Miss Mabel Biddle, of Bridgport, Conn.

Mongols and Manchuria do an enormous trade in dog skins.

Lignite Coal Development

Saskatchewan Government Negotiating With Private Concerns To Take Over British Columbia Plan

Control of the lignite plant at Blair, Sask., is now in the hands of the Saskatchewan Government, which is negotiating with one or two firms to take over the plant and operate it as a commercial utility.

An announcement to this effect was made by Hon. J. G. Gardiner, Minister in charge of the Bureau of Labor and Industries. "The plan which, after all, was only an experimental station, has served its purpose in demonstrating the possibility of making lignite power from carboniferous lignite," said Mr. Gardiner. "Some chemical and mechanical problems were worked out and what remains now of the original scheme is to prove the commercial feasibility of the project."

"The Federal Government has relinquished its equity in the plant to the Saskatchewan Government provided the plant and equipment are used to complete the work as originally planned when the three Governments or companies agreed to develop the lignite power of Manitoba, while withdrawing from the agreement some time ago and also expressed a willingness to allow its equity to remain while the plant is in operation."

"It is not the policy of this Government to continue on any commercial undertaking and we will not therefore remodel the plant as an industrial plant and operate it as such. It is to interest private capital to undertake the commercial operation of the plant under some form of lease."

The Government may, of course, carry on further research or experimental work in connection with the coal, but in no sense will it operate the plant. We are at present negotiating with one or two concerns and hope to have plans operating commercially some time this year."

Stock Train Makes Record

Travels 1,785 Miles and 40,270 People Attend Exhibit

The better livestock train returns to Regina after a six weeks run in Eastern and Northern Saskatchewan, and was dismantled by a railway staff. They travelled 1,785 miles and got in touch with many thousands of Saskatchewan people and interested in the future of the province. The train made a record in attendance, surpassing all previous agricultural exhibitions of any description that have operated in Saskatchewan. The attendance amounted to 42,770, which was very favorable with the attendance of about 15,000 for the better Bull Train in 1922, and an attendance of 32,000 for the better Farm Train that same year. One of the great advantages of this train is that it gets in touch with thousands of people that would not be reached by any series of meetings or by any of the usual channels for the preaching of gospel of better livestock. The attendance record which has been made is very satisfactory. The sale of purchased bulls second of exhibition, a total of 24 purchased bulls being disposed of. They consisted of 4 Shorthorns, 16 Herefords, 7 Aberdeen Angus, 7 Holsteins and 2 Ayrshires. These bulls had all been tested for tuberculosis, leptospirosis, and all had been found to be a safeguard against many diseases as well as healthy at the point. The prices on the bulls ranged from \$75 to \$100.

Claim Negroes are ill-treated. Strong representations have been made to the Cuban Government by Great Britain that Jamaican negroes, who come in thousands each year to Cuba to work in the sugar cane fields, have been discriminated against and ill-treated. The British charges in cable claims that the Jamaicans are mistreated in the quarantine station at Santiago, discriminated against in the courts, and even denied the right of free movement by rural guards.

MUDDY CREEK BOTTOM BECOMES BEAUTY SPOT

One of the beauty spots of the City of the Lions. The approach to the station called Thornton Park, in honor of Sir Henry Thornton, Chairman and President of the Canadian National Railways, who materially assisted the Parks Commissioners by contributing 10,000 yards of earth for the filling and beautification of the grounds. The approach to the station is now completed but when finished it will be one of the most attractive railway terminals on the continent. The present plan of the grounds is to plant a large number of flowers and many hundreds of beautiful shrubs in their attractive foliage and their charm.

Olympic Marathon Winner

Finland, the grandest Finnish world worker, who won the Olympic marathon at Paris in 2 hours 42 minutes 22.5 seconds.

AUBEN ETHEKROD

Finland, the grandest Finnish world worker, who won the Olympic marathon at Paris in 2 hours 42 minutes 22.5 seconds.

The Milling Machine

Effects a Saving and Advantageous in Other Ways

Officials of the Experimental Farms Department have to make a saving of 20 per cent to seriously consider the installation of a milling machine. Experience at a number of Experimental Farms and Stations goes to prove that these machines are decidedly advantageous. For a 20-cow, 2-cow outfit is looked upon as able to take care of the milling. Farm officials estimate that the running expenses of the larger machine operated by 30 cows is equal to about 2 cents per cow per day. The man with a milking machine, who has been proved, can milk from 20 to 25 cows an hour, whereas 7 cows an hour are milked by the average farm hand. Machine milking produces greater uniformity than is possible when different people are doing the milking. Several years' experience of mechanical milking on the Central Experimental Farm at Ottawa shows that the way do not dry off any more quickly than when milked by hand. Old cows accustomed to hand milking do not accept the machine as readily as heifers, which show no antipathy towards the machine and the cows, and adapt the out to suit the other, giving each their proper share of attention at the proper time.

Too Much. "I say, y'know, all these bills are dated 1 month before we were married."

"Vegetating, I know they are?"

"Well, it's a bit like to expect me to pay for the bill I was caught with."

One of the world's largest dams is being constructed on the Indus River, in India, for irrigation purposes.

If a man fails to get what he really deserves he ought to be thankful."

Great Forward Movement In Conservation Bound To Have Far Reaching Effects

A great forward movement in conservation and use that affects Canada profoundly, was inaugurated by President Coolidge in the convocation at Washington, May 22 to 24, of the first National Outdoor Recreation Conference. At this conference, which embraced national and state organizations, was represented upon the special invitation of the President of the United States. It was intended that the fully representative representatives of the National Parks, advised by Mr. W. W. Cory, Deputy Minister of the Department of the Interior, and Mr. J. R. Hawfin, Commissioner of Canadian National Parks. Owing to unforeseen circumstances Mr. Hawfin was prevented from attending and to Mr. Cory fell the duty of acting for Canada at the various meetings of the conference.

Canada could not remain aloof from a conference of this kind even should she desire to do so, because outdoor recreation, in the broad terms in which it will be dealt with on this occasion, involves the international guardianship of fish, migratory birds, scenery, water, pollution of streams, international games, and international recreational travel. The Dominion is already in touch with these subjects at a dozen points and the chair work of the conference was to emphasize and organize the activities of the various departments.

The personnel of the conference indicates the important place the subject occupies in the minds of the United States of the United States. It was called and opened by President Coolidge, and the executive chairman was Hon. Theodore Roosevelt, Assistant Secretary of the Navy. Other members of the United States cabinet who had been present were: Hon. J. W. Weeks, Secretary of War; Hon. H. B. Smith, Secretary of the Interior; Hon. H. C. Wallace, Secretary of Agriculture; Hon. J. H. McLaughlin, Secretary of Commerce; and Hon. J. T. Davis, Secretary of Labor.

The conference was devoted to which the people interested in the various forms of outdoor recreation are fully represented on the permanent organization by their acknowledged leaders. These details need not be gone into here the point being this: The people everywhere now recognize the importance to the whole country of properly directed sport and recreation. The crowding of people into great urban centres on the one hand and the development of the country on the other have changed the outlook of the people of North America in regard to outdoor recreation in general. The people are now more largely of the people no longer have, as they had thirty years ago, open spaces near at hand for recreation, and the automobile has provided the means by which they may escape into the forests, the mountains, and along the hard-sailing do not accept the machine as readily as heifers, which show no antipathy towards the machine and the cows, and adapt the out to suit the other, giving each their proper share of attention at the proper time.

Reliable Houses Should Be Protected by Trade Mark. Twenty-five hundred one hundred packets of vegetable seeds examined in the seed laboratory at New York. Agricultural stations were found to be absolutely worthless for planting purposes. Seeds of low quality have been sold in Canada. We are informed that one of the largest seed houses recently secured a job lot of old seeds and marketed them in its standard packages without bothering about the quality. This is very damaging to the whole seed industry and to the homes which have for years been building up a reputation for reliability founded on public confidence. It might be well for the later crop to be sold on a guarantee of quality, and protection and act standards which would be guaranteed by an association trade mark.—Theatrical Box.

At a recent dinner Sir Robert Borden, Prime Minister of Canada, told the following story. The bridegroom and the best man were at the altar awaiting the bride. The former, Borden, very wise and sensible about to faint. "What's wrong Mr. J. J.?" asked the best man. "Yes, I'm in the chair. He's got lost on my thing. He's got lost the ring?" "No," came the reply, "but I don't I've lost my 'emulation.'"

Trappers Travel In Luxury

Palatial pleasure are carrying the trappers home from Alaska. Instead of stealing out of the great northern wastes in canvas piled high with supplies, the trappers are now in a fashion—these intrepid adventurers are the gentry of the trade, travelling in luxury.

The highest and lowest point in the United States both are in Inyo County, California.

has been evidenced by what has been done in the case of national parks. In the creation of game preserves and sanctuaries, both in the settled parts of Canada and in the protection of native life in the bush, in the preservation of the buffalo as well as other large and small game animals and migratory birds, in the establishment of national forests, and in the holding of Empire and National Conferences on the conservation of forests, wild life, and public health. Actively in these different spheres have been so great in Canada as it is of the present time. It is feared that there shall be no slackening but an increase of effort, and that the work already begun shall be extended and made more far-reaching and effective by further organization and co-operation.

Natural Resources Bulletin

Sea Herring Most Important of the Food Fishes of Canada

The Natural Resources Intelligence Bureau, under the direction of the Minister of the Department of the Interior at Ottawa says: "The sea herring is a comparatively small fish, yet it is one of the most important of the food fishes of Canada. On both the east and west coasts large catches are secured. On the east coast the catch was 1,255 tons, New Brunswick 1,168 tons, Prince Edward Island 2,551 tons, and 2,515 tons in British Columbia. The British Columbia coastal waters are, however, Canada's greatest herring grounds. It is estimated that almost the entire length of the coast, not particularly around Vancouver Island, is herring country. A large packing industry has been built up for what is known as 'Scottish' herring, which consists of herring, salting and packing the fish in barrels. Six thousand barrels of this pack were put up in British Columbia in 1923."

The Orient is the chief market for herring, which, to meet this demand, are 9 months on the way to their thousand tons were put up in this manner for China and Japan. This 50,000 tons represented approximately 700,000 fish. It is claimed by fishermen that the supply of herring is ample and that there is no likelihood of depletion due to the large taking."

Of the 1923 catch of herrings, 25 tons were net fresh, 5,005 cases were canned, 251 tons were smoked, 37,129 tons (net weight) were dry salted, 21,774 barrels were pickled, 162,123 barrels were used as bait, and 7,463 barrels were used as fertilizer.

"The herring is but one of the many commercial fishes for which the fisheries of Canada are famous, and is of point of value, when freshly caught bringing a revenue to the fishermen of \$1,000,000, or a little under one cent per pound."

Selling Low Quality Seed

Reliable Houses Should Be Protected by Trade Mark. Twenty-five hundred one hundred packets of vegetable seeds examined in the seed laboratory at New York. Agricultural stations were found to be absolutely worthless for planting purposes. Seeds of low quality have been sold in Canada. We are informed that one of the largest seed houses recently secured a job lot of old seeds and marketed them in its standard packages without bothering about the quality. This is very damaging to the whole seed industry and to the homes which have for years been building up a reputation for reliability founded on public confidence. It might be well for the later crop to be sold on a guarantee of quality, and protection and act standards which would be guaranteed by an association trade mark.—Theatrical Box.

South of Post Office

J. Devitt, who has been east on a business trip, returned home last Monday.

Mrs. G. H. Worts returned home last Sunday, after a holiday trip through the mountains.

Miss Hopper, who is on her way back from the Pacific coast, is a present visiting her aunt Mrs. A.L. Stone.

Walter McElary, who has been in Wallacburg all summer, returned to town yesterday.

Mr. and Mrs. J. Kitchen, of Fernie, B.C., are in town this week visiting the former parents, Mr. and Mrs. J. Kitchen.

Miss McLary, of the Post Office staff, is at present on her holiday. Miss Benforth is taking her place on the P. C. staff.

Lieut. Gov. C. Best opened the air at Brooks yesterday. Representatives of the Calgary Board of Trade were also present for the occasion.

Hillhurst footballers played in Medicine Hat last Saturday evening. The players were in a draw, both teams having scored one goal.

Mr. and Mrs. Joe Russell, of Weston Ont., stopped off here on their home from the Pacific coast to visit Mrs. Russell's sister, Mrs. T. A. Hicks.

A number of complaints have been registered lately about horses running at large in town. Several catches have already been destroyed.

Lo Holsten, Supr. of the glass plant here last week were called by his daughter yesterday informing him that he is now expected to receive his new and old shoe receiving shoes and he certainly looks considerably better and he is wearing a smile that won't come off.

Those travellers are still busy in town. One day last week they called on the St. Ambrose church hall and the next day they were in the town boys in the hall. This is the most comfortable place that has been here for some time. More homes have also been entered during the past week.

Mrs. Laker has a fine cherry tree in her garden this year heavily laden with fruit. Although this is not the first year it has borne fruit, there is a much larger quantity this year than ever before. Mrs. Laker noted this from a small plant. She is naturally quite of good stock. This is but another proof of what can be grown in this country if people only try them out.

C. Scott is spending this week with his family here. Mr. and Mrs. Scott and family are now arranging to move to Calgary. They expect to ship their furniture this week and their many friends will regret that circumstances make it necessary for them to leave Redcliff. Since coming to Redcliff Mr. Scott has always taken keen interest in all movements for the advancement of the town but in town will be more active than in military and musical circles.

BIRTHS
BRYAN—In Minnesota on Aug. 12, 1924, to Mr. and Mrs. Frank Bryan, formerly of Redcliff, a son.

BENSON—A nurse Patterson's hospital, Redcliff, on Saturday, Aug. 30th, to Mr. and Mrs. Frank Benson, a daughter, Florence Marion.

WANTED
FOR SALE—A quantity of thistles and wheat, cut and baled, also straw for sale. Apply to R. J. McDonald.

COW FOR SALE—Fresh a few months ago in good condition. Apply C. D. BOUTY, at the Veterinary Office.
